DISCUSSION

CAST: Worked on finding and fixing the problem with small overlaps in feature-based motion estimation. This is done to make sure that arbitrary stitching order trees, which can give rise to a very small overlap between images, work properly. Updated some of the display processing functions in the CAST software. This is done to make sure that CAST software works on a wider range of platforms. Geometric lens distortion correction functions are integrated with CAST software. This ensures that CAST software can be used with cameras having lens distortion.
